Claim Rejections - 35 USC § 102

1. Claims 1-3,8-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Demian (6889088).

Demian is considered to show all of the structure of the above claims. Col. 2:20-23 teaches the use of square waves. Col. 5:44-51 teaches the ability to adjust the current amplitude between 0 and 80 mA, and the pulse frequency from 2 to 150 HZ. Col. 6:1-10 teach that the device can be used for pain relief, in a similar manner to the well-known use of TENS devices.

Claim Rejections - 35 USC § 103

2. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Demian.

The method steps of the above claims are considered to follow obviously from the normal workings of the Demian device. TENS devices, of which Demian can be considered, are well known in the art to treat nerve and muscle pain.

3. Claims 4,11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Demian in view of Liss et al (4784142).

To use a potentiometer to adjust the current amplitude is considered old and well known in the art, as shown by Liss.

Art Unit: 3762

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hogan (4782837) shows a similar current adjustment means as to applicant.
